

## Online Demo Shows Newest Environmental Monitoring System for cGMP/FDA-regulated Environments

Vancouver, British Columbia, Canada

November 21, 2009 — Veriteq Instruments has released a new online demo of the latest iteration of their monitoring, alarming and reporting system for temperature and humidity in controlled environments — viewLinc™. The demo is accessible online at [http://www.veriteq.com/landing-pages/viewLinc\\_demo\\_request.htm](http://www.veriteq.com/landing-pages/viewLinc_demo_request.htm)

Designed for monitoring and alarming temperature, humidity and other critical parameters in controlled and FDA-regulated environments, viewLinc is the only system of its kind to ensure continuous, gap-free data for records that must comply with 21 CFR Part 11.

The 5-minute online demo gives a brief overview of viewLinc's basic functions, including the ability to generate and deliver reports automatically. Other features shown in the demo include: browser-based interface and site-licensing, real-time view of multiple environments and trends from remote locations, flexible alarm management via text/email to PC, cell phone, pagers and more.

Veriteq's VP of Marketing Ken Appel says, "The demo shows how viewLinc significantly reduces the risks of product damage or a failed audit. The system's easy scalability and audit-ready reporting helps customers from NASA to the largest pharmaceutical companies to easily manage their critical environments and stay compliant."

Unlike centralized monitoring systems, viewLinc ensures against lost data with three discrete recording methods:

- Independent memory in each data logger
- Back up to the host PC
- Automatic file transfers

Because the system installs on the user's existing network — Ethernet, Power over Ethernet, WiFi — the cost of outsourced IT services (required with most networked monitoring systems) is eliminated. viewLinc also installs easily to a virtual server.

Veriteq's viewLinc system is available from a worldwide network of direct sales and independent distributors. For more information, visit [Veriteq.com](http://Veriteq.com) call **800-683-8374** (North America) or email a Veriteq representative at [customersupport@veriteq.com](mailto:customersupport@veriteq.com).

### About Veriteq Instruments

Veriteq provides fail-safe records for temperature, humidity and other variables in controlled environments where serious financial or regulatory consequences are at stake. An easily scalable network of independent recorders with best-in-class accuracy, Veriteq's monitoring, alarming and reporting solutions are ideal for applications subject to audit. Veriteq delivers and supports systems through direct and distributor locations worldwide.
