

viewLinc™ for Calibration Lab Monitoring

Easier to install than any other system... Links to your existing network

The viewLinc System:

- > Accurate temperature & humidity data loggers
- > A2LA-accredited calibration
- > Real-time monitoring, alarming, graphing, and reporting
- > Site-wide software license
- > Small capital investment and easy expansion

Problem:

An audit of a calibration lab raised concerns about how the lab was monitoring ambient temperature and humidity conditions, critical parameters for calibration quality. The auditor pointed out numerous weaknesses in the lab's monitoring system:

- > The chart recorder's inaccuracy couldn't provide the information they needed because the width of the pen produced too much error;
- > Dubious accuracy and calibration of the chart recorder put the calibration lab monitoring in jeopardy;
- > No reliable 24/7 alarm notification system. Lacking an external alarm system, the calibration lab would drift out of specification, causing costly downtime;
- > Some historical charts were missing and it was undetermined as to whether the chart paper had run out or the charts were misfiled;
- > The Cal Lab's client required ISO 17025 accreditation.

The laboratory manager needed a better alternative. He considered purchasing high-end chart recorders, but time-consuming maintenance would still be needed, e.g. chart changes, frequent calibrations, transposing data, etc.

Solution:

Attracted by the high accuracy and full alarming capabilities of Veriteq's viewLinc system for Cal Lab monitoring, the lab manager decided to replace his chart recorders with the Veriteq System.

viewLinc Features:

- > Superior Accuracy: to +/-1%RH and to +/-0.10°C
- > Clear visual display that's easy to read from a PC display
- > Alarm Notification: 24/7 coverage with email to PC, pager, or cell phone
- > Easy Installation: Typically done in-house in about 30 minutes
- > Automated download of historical records, no more chart changes needed
- > Redundant Data Storage: Each data logger contains on board memory and 10-year battery
